## Summary

Software developer with upstream contributions merged into LLVM/Clang (`llvm:main`) and 2 years of production experience at Ericsson on CodeChecker, a large-scale open-source static analysis platform used by ~3,000 engineers internally and adopted externally by companies including Basalte. Works across the full stack with depth in C/C++, Java, and TypeScript. Currently completing an MSc in Software and Service Architectures at ELTE while teaching OOP/Java at university level.

## Experience

**Software Developer** **Budapest, Hungary**
*Ericsson, @BNEW SAN, CodeChecker* *July 2024 – Current*

- Contributed upstream to the LLVM/Clang open-source project: refactored memory-error diagnostic messages across 28 files in the Clang Static Analyzer, clang-tidy, and clang-tools-extra subsystems; changes accepted and merged into `llvm:main`.
- Delivered production-grade OAuth2 integration with major providers (Google, Microsoft, GitHub) using BFF architecture with Microsoft Entra ID, enabling secure authentication for a platform with 2.5k+ GitHub stars used by ~3,000 engineers across Ericsson.
- Designed and delivered a new Filter Preset feature end-to-end, enabling users to save, manage, and apply named filter configurations across the platform.
- Improved deployment reliability by automating database creation, eliminating errors from missing databases.
- Implemented a Thrift API version consistency check in the build process to detect and halt on virtual environment mismatches, preventing silent runtime failures.

**Intern** **Budapest, Hungary**
*Ericsson, @BNEW SAN, CodeChecker* *Feb 2023 – July 2023*

- Designed and implemented the initial OAuth2 authentication framework for CodeChecker, integrating Google, Microsoft, and GitHub identity providers; established the security architecture and core implementation later delivered to production as a full feature.

**Practice Teacher** **Budapest, Hungary**
*Eötvös Loránd University* *Aug 2025 – Current*
*Object-Oriented Programming (Java)* *February 2026 – Current*

- Conduct weekly practice sessions on core OOP principles; review and grade Java projects with Javadoc and unit tests; support students in debugging and software design patterns.

*Telecommunication Networks* *September 2025 – January 2026*

- Taught TCP/UDP, socket programming, Wireshark, and subnetting; guided lab sessions using Mininet and Linux networking tools; evaluated midterm projects with structured feedback.

## Skills

**Programming Languages**: Java, Python, JavaScript, TypeScript, C/C++, C#, SQL, Shell Script, PowerShell, HTML, CSS

**Frameworks & Technologies**: Spring Boot, Angular, React, Svelte, Laravel, Flask, Microsoft Entra ID, Oracle Cloud Infrastructure, LLVM, Clang, Docker, Git

**Languages**: English (professional), Russian (professional), Azerbaijani (native)

## Projects

*Burger Alert* *2025*

- Deployed a Python/Flask web app for group lunch ordering and car distribution at the office; self-hosted on Oracle Cloud Infrastructure using Docker and Caddy; actively used by colleagues daily. 18 GitHub stars, 3 releases: github.com/feyruzb/burger-alert

## Education

**Eötvös Loránd University** **Budapest, Hungary**
*MSc Computer Science (Software and Service Architectures)* *Sep 2025 – Current*

**Eötvös Loránd University** **Budapest, Hungary**
*BSc Computer Science GPA 3.81/5* *Sep 2020 – July 2025*
